Compact by design.

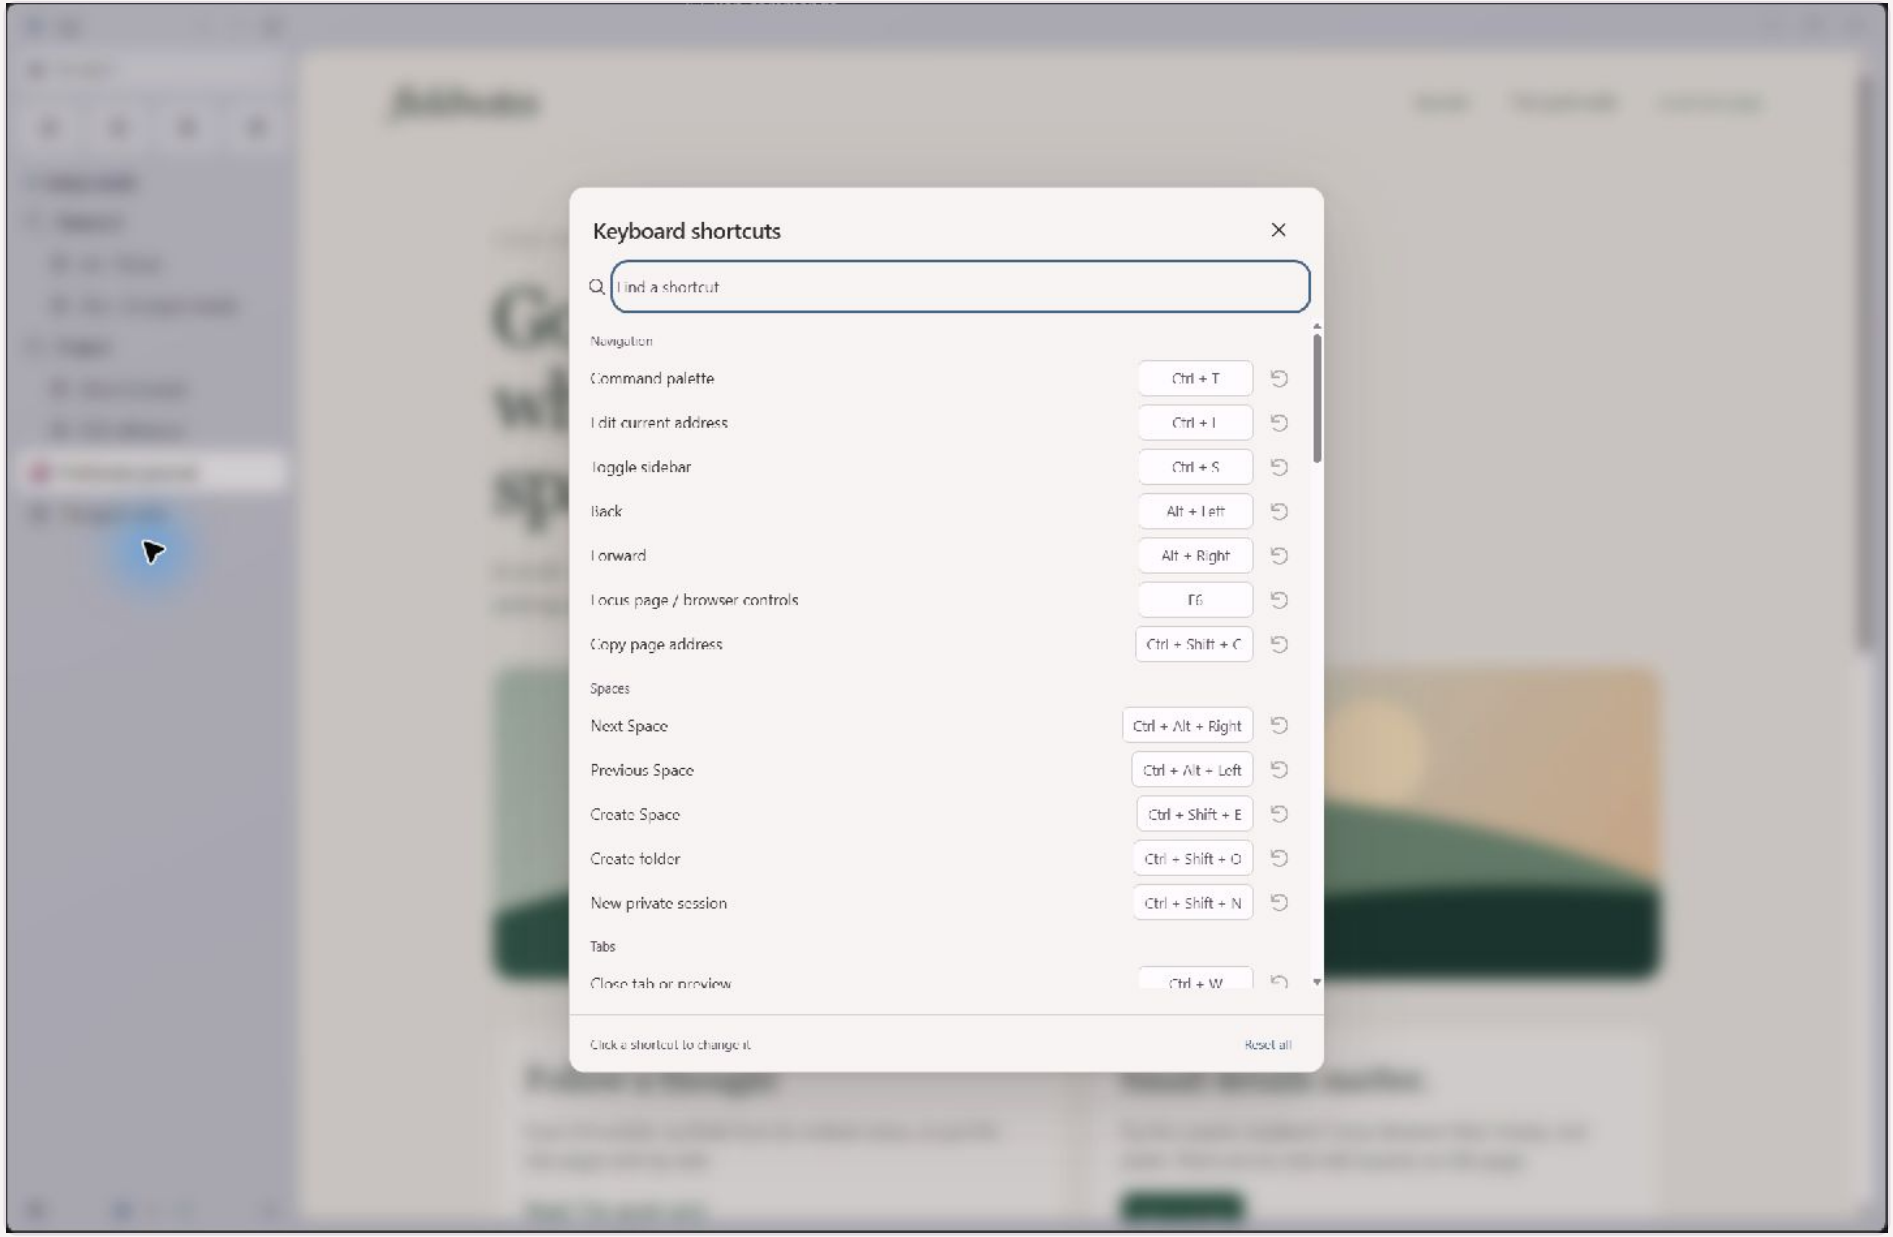

Navigation, address, favorites and folders share a 224px sidebar with 32px tab rows. Drag a tab into favorites to pin it, or back into the list to unpin. The page keeps its space and live state.

One palette. Clear intent.

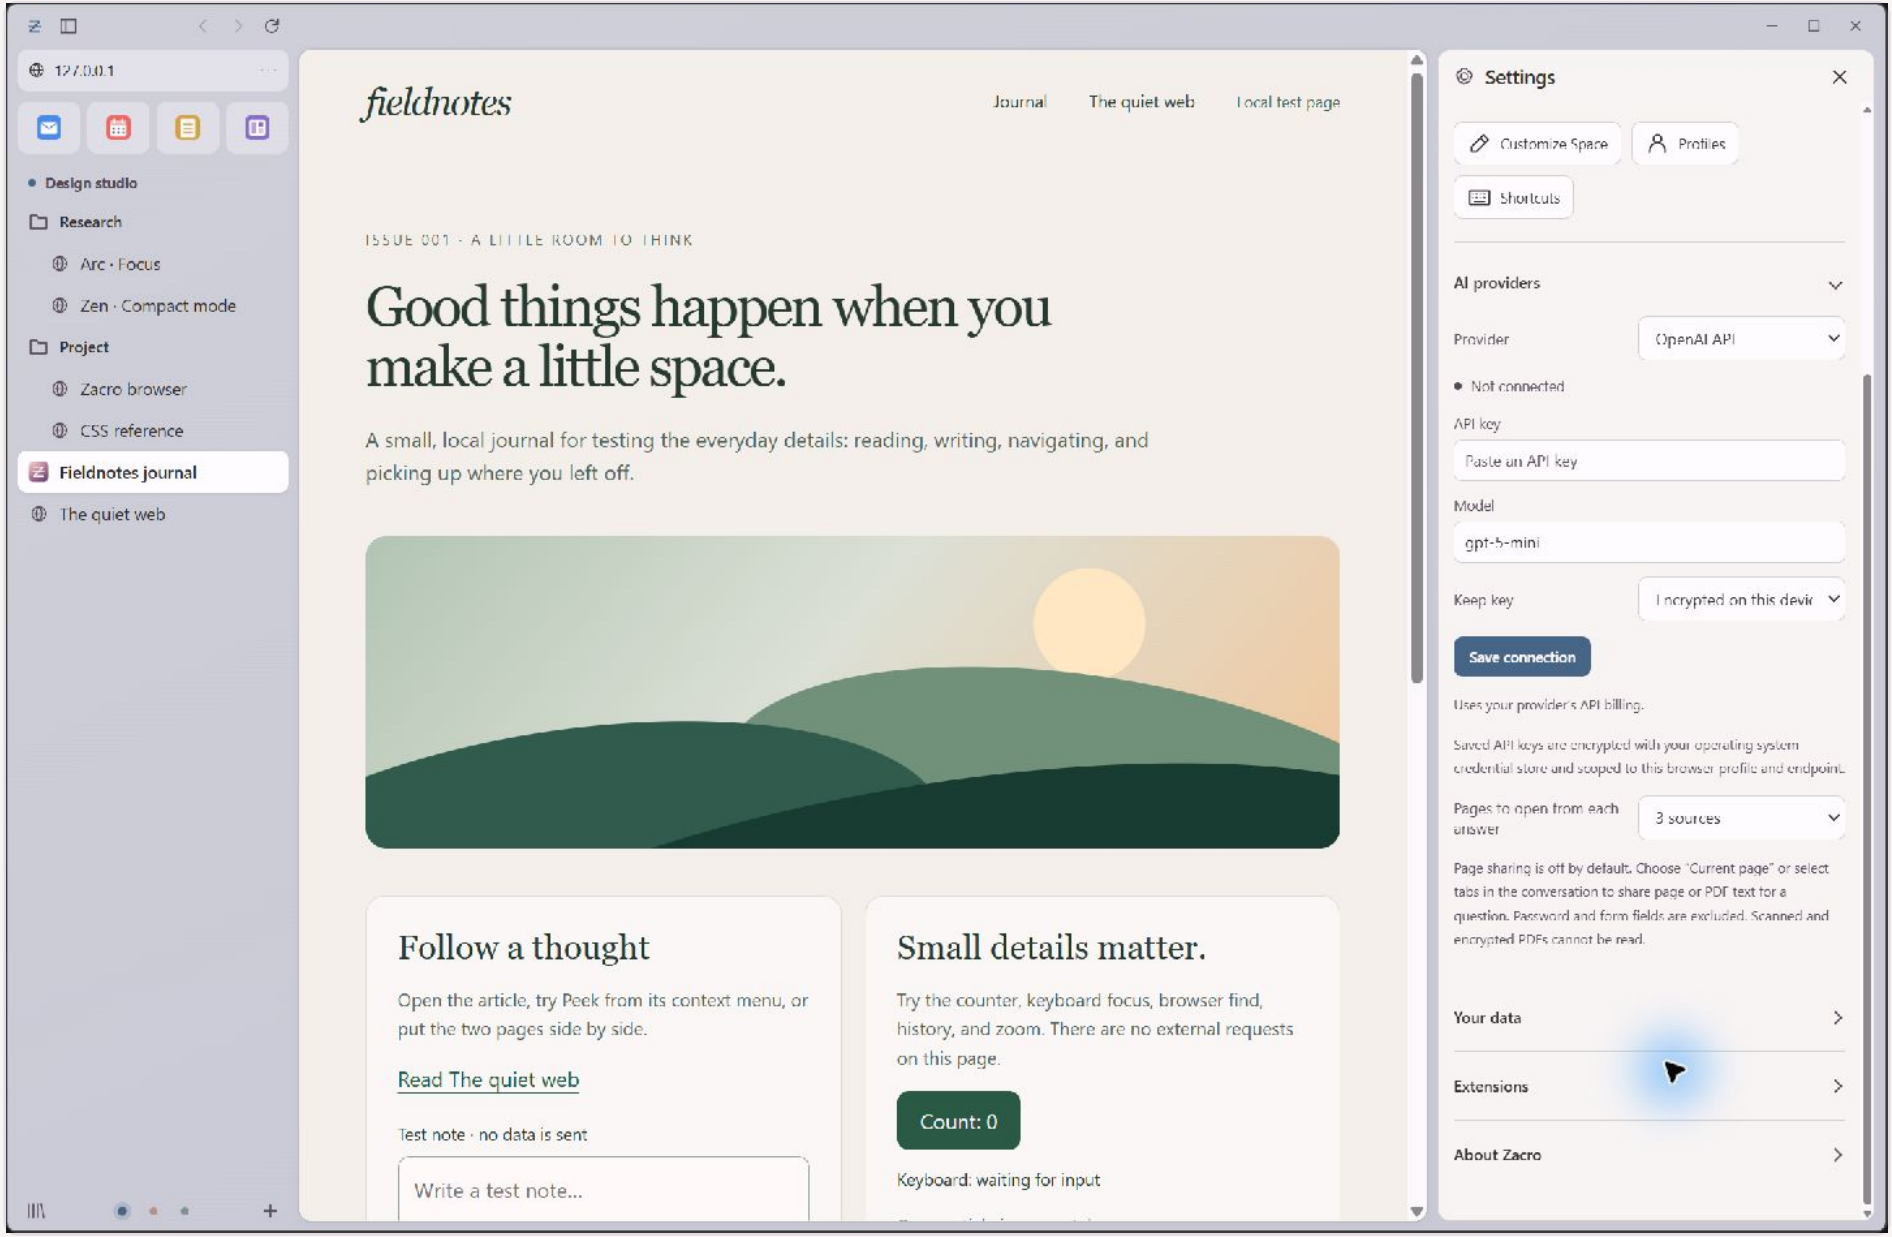

Ctrl/Command + T prepares a new destination; Ctrl/Command + L edits the current address. Type / to find browser actions. The sidebar stays usable beside the palette. Opening or cancelling it never adds a disposable tab.

Familiar keys. Your choices.

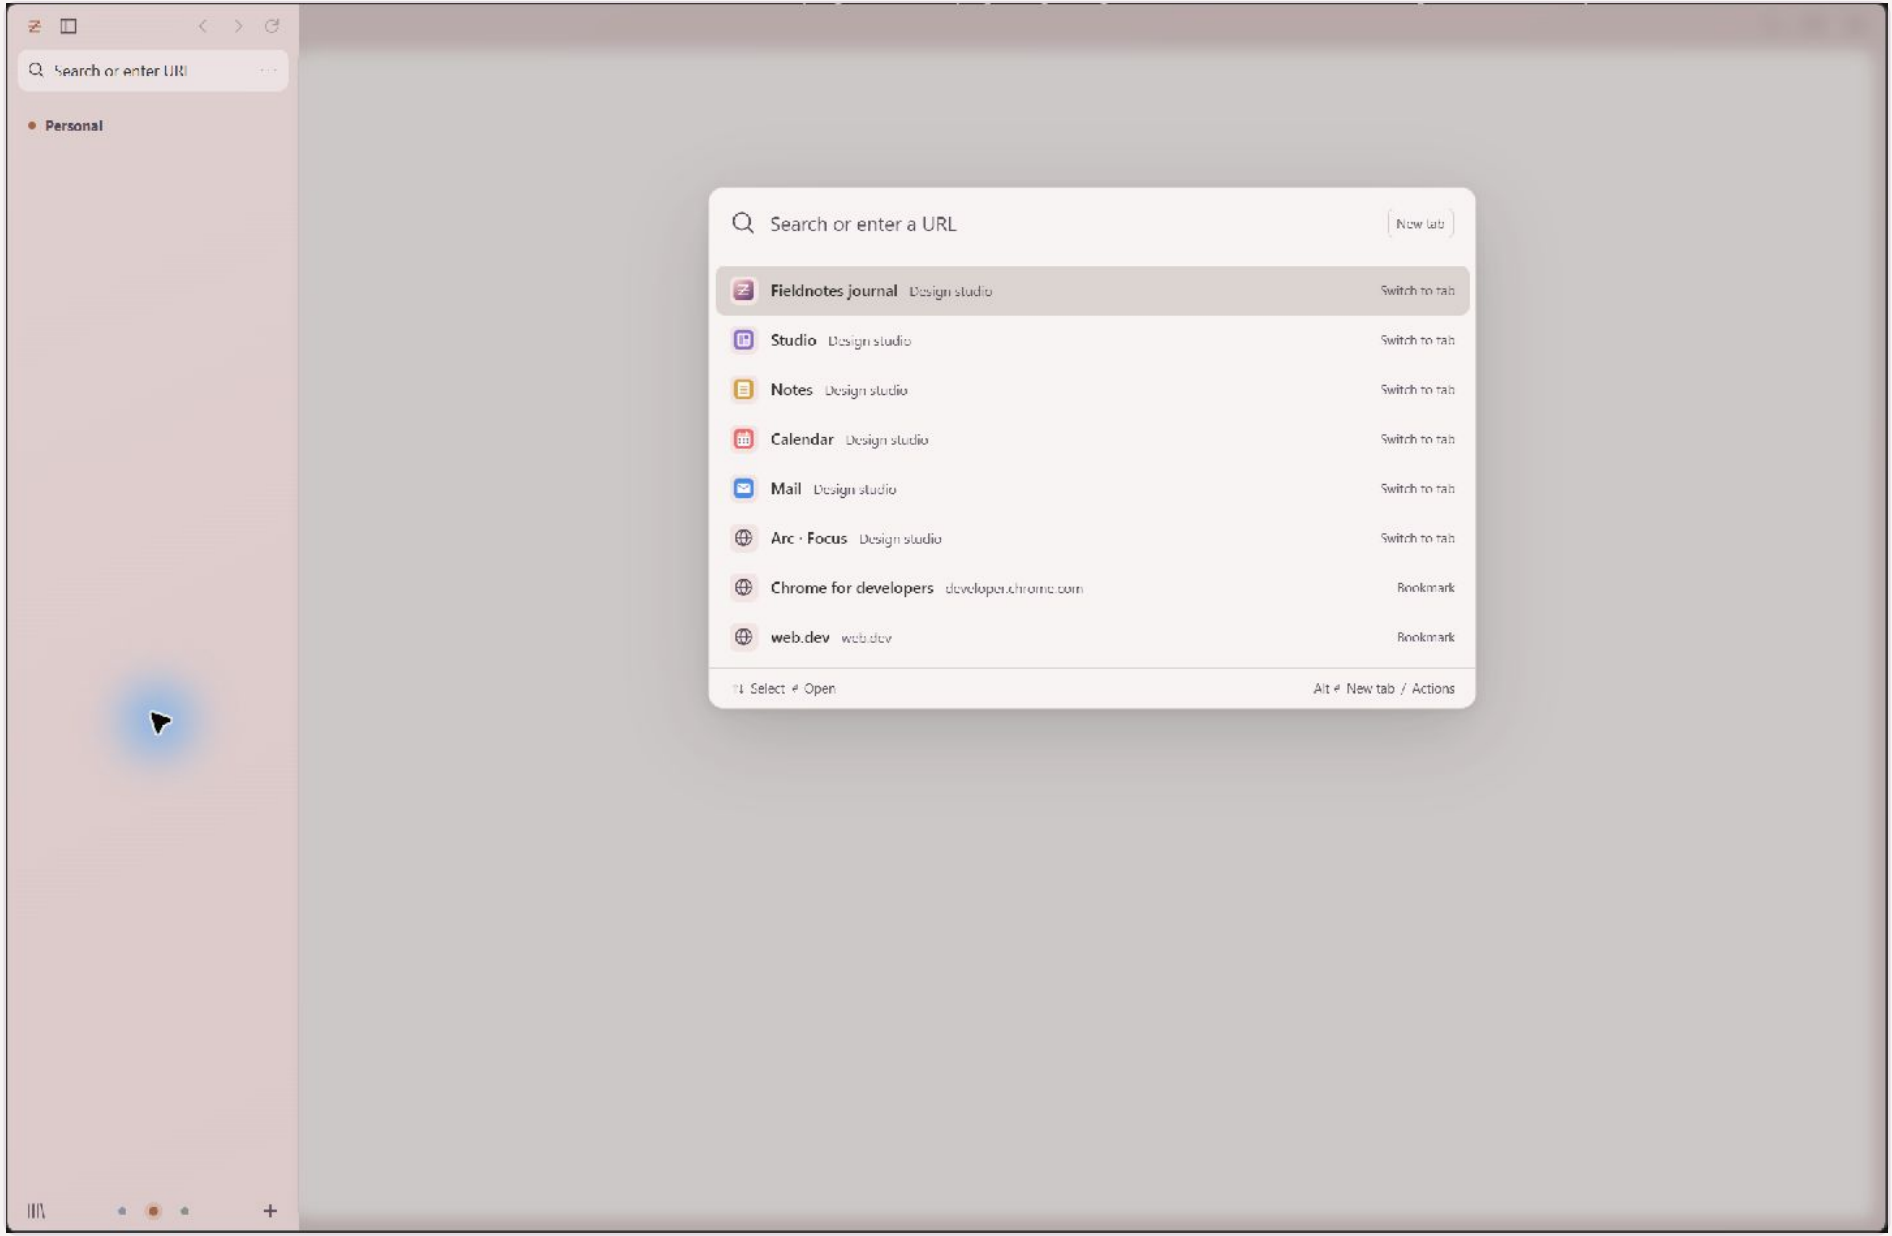

Arc-style defaults: Ctrl/Command + S toggles the sidebar, Ctrl/Command + D pins a tab, and Ctrl + Tab visits recent tabs. Search the catalog to record, disable or reset a binding. Conflicts are checked before saving.

Six explicit connections.

ChatGPT subscription, Claude subscription, OpenAI API, Claude API, OpenRouter, or an OpenAI-compatible server. Subscription usage and API billing stay separate; page sharing is explicit. Live sign-in and inference acceptance remain pending.

Start without tab clutter.

An empty Space opens the command palette automatically. Submit an address or search to create a page; Escape leaves the Space empty. New Tab Page remains an explicit action. This is a development build; see the README for release limits.
