# Room for the page.

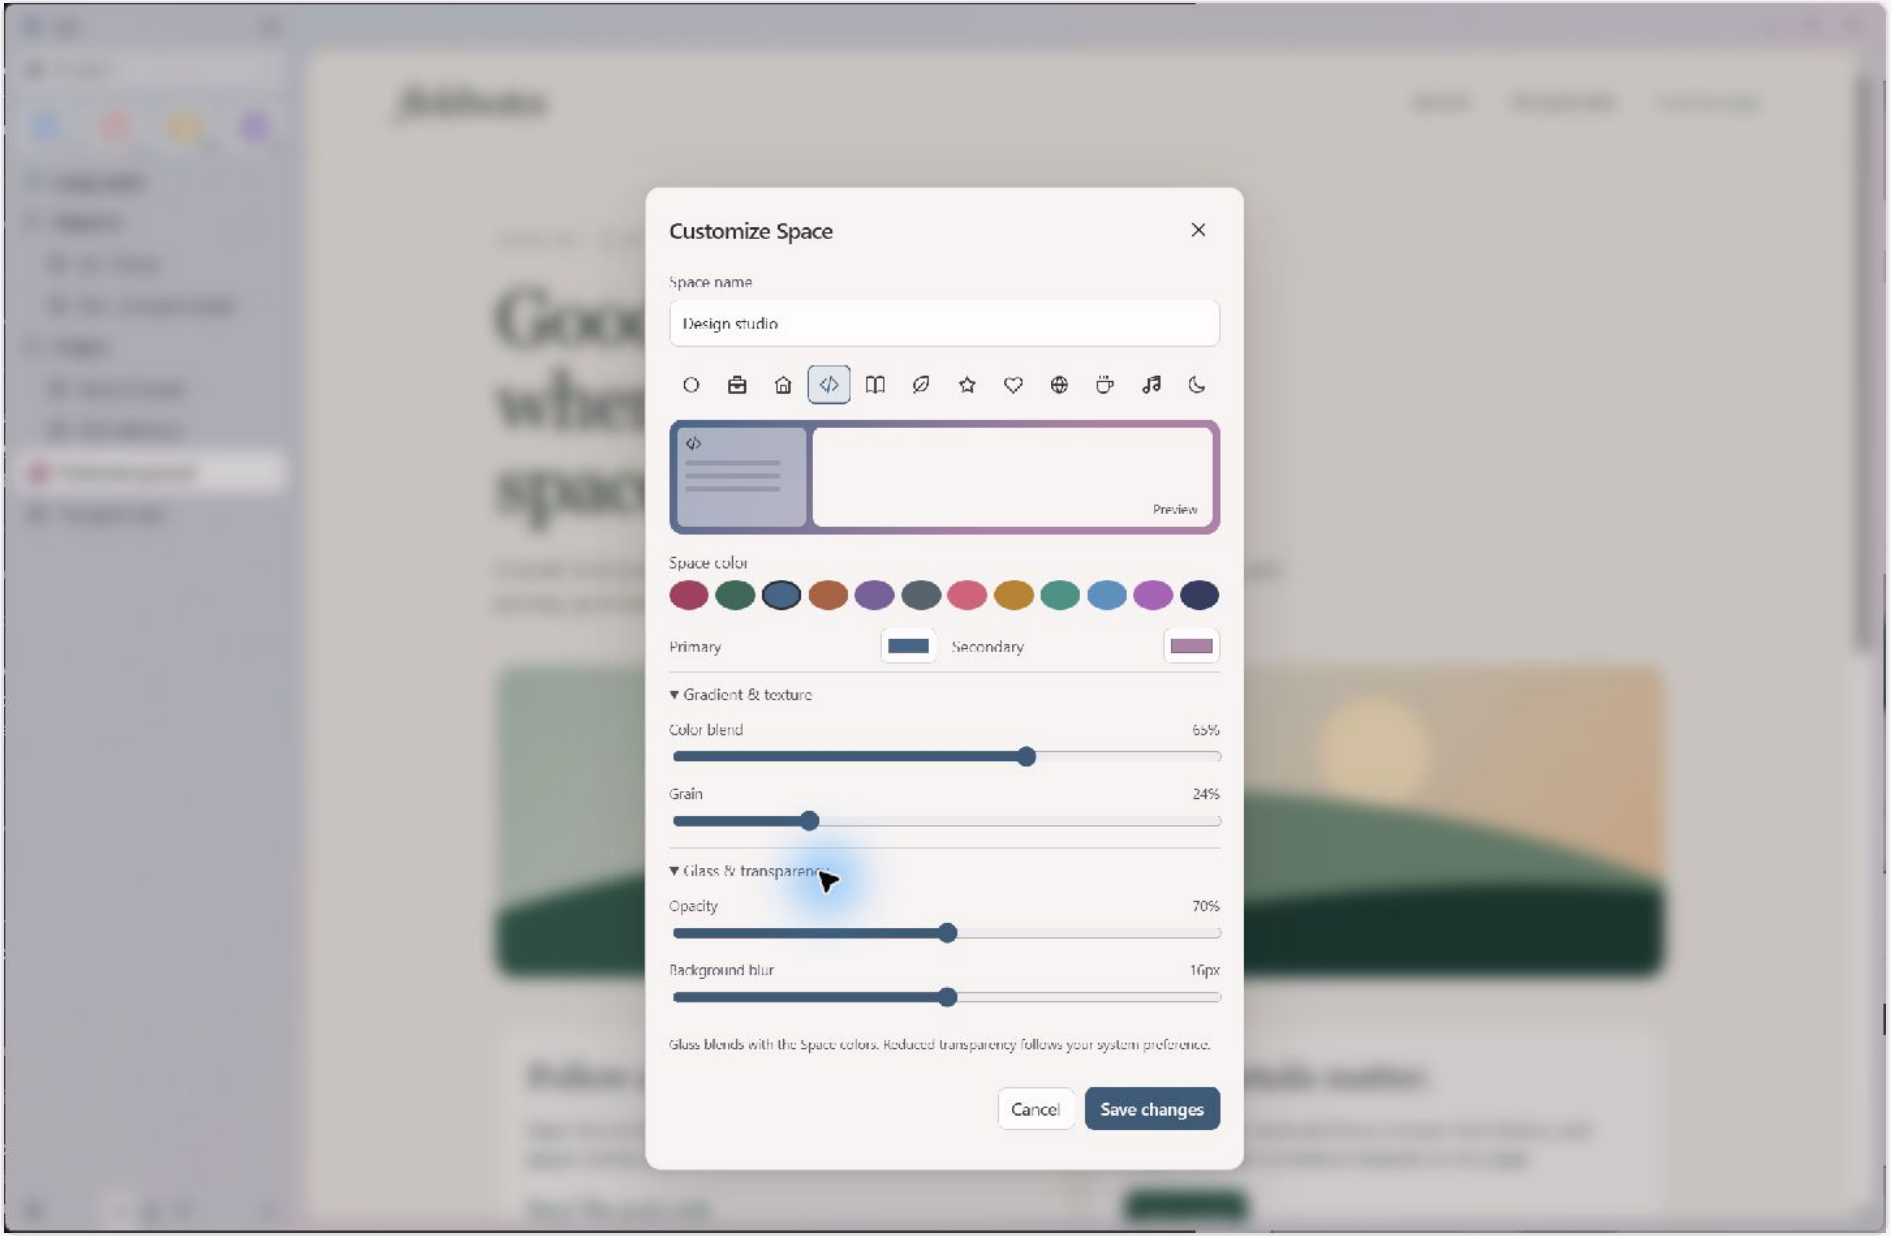

A compact sidebar, equal page gutters and individual Space icons keep the workspace legible. Favorites show whether their pages are loaded, sleeping or closed. Closing a favorite keeps its pin; inactive favorites can sleep without disturbing active pages, drafts, media or downloads.

# Find it. Do it.

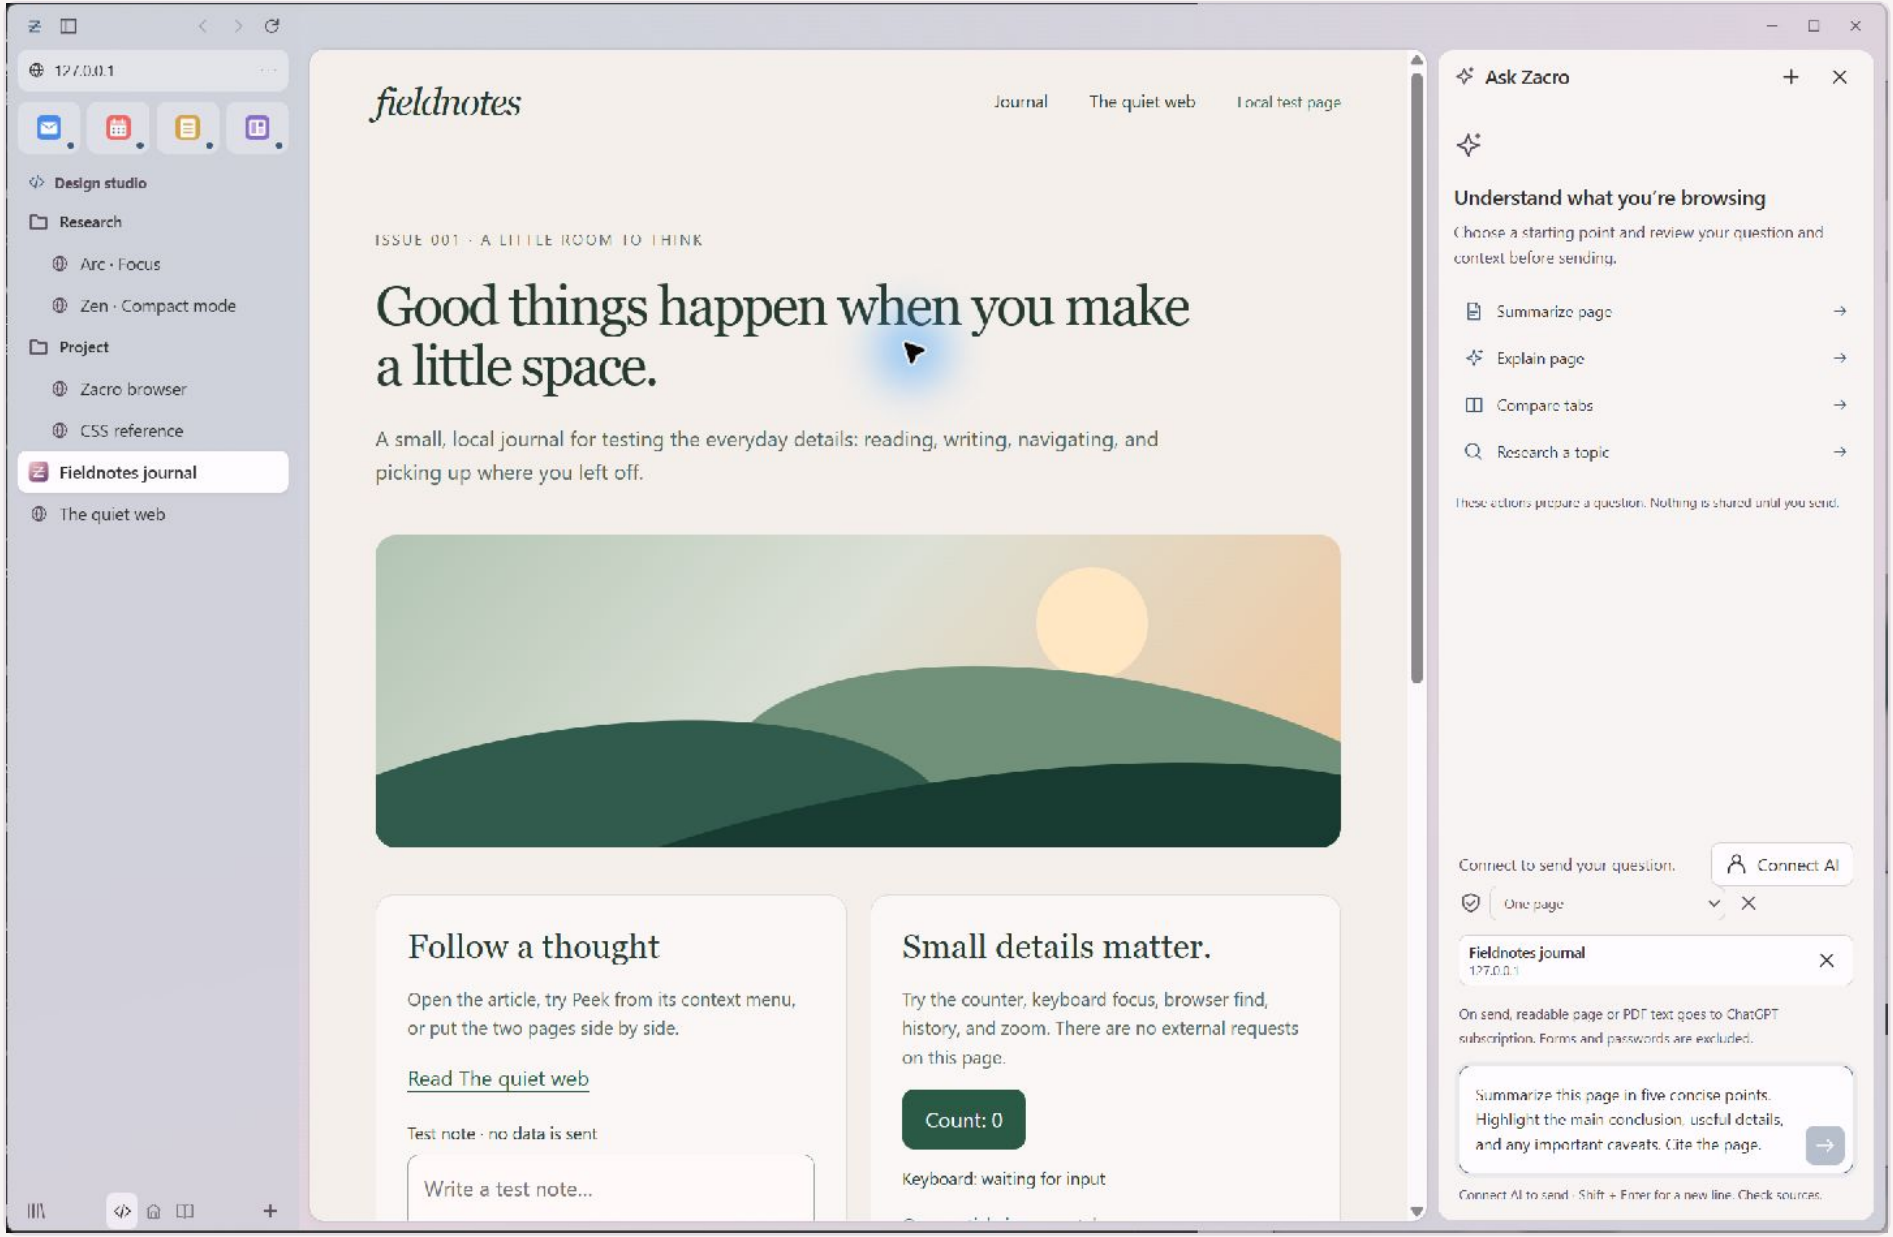

Filter tabs, Spaces, bookmarks, history and actions in one palette. Use @ for tabs, # for Spaces, or / for commands. Only the page blurs, inside its existing rounded frame; the sidebar remains usable. Opening the palette never creates a disposable tab.

# Make a Space your own.

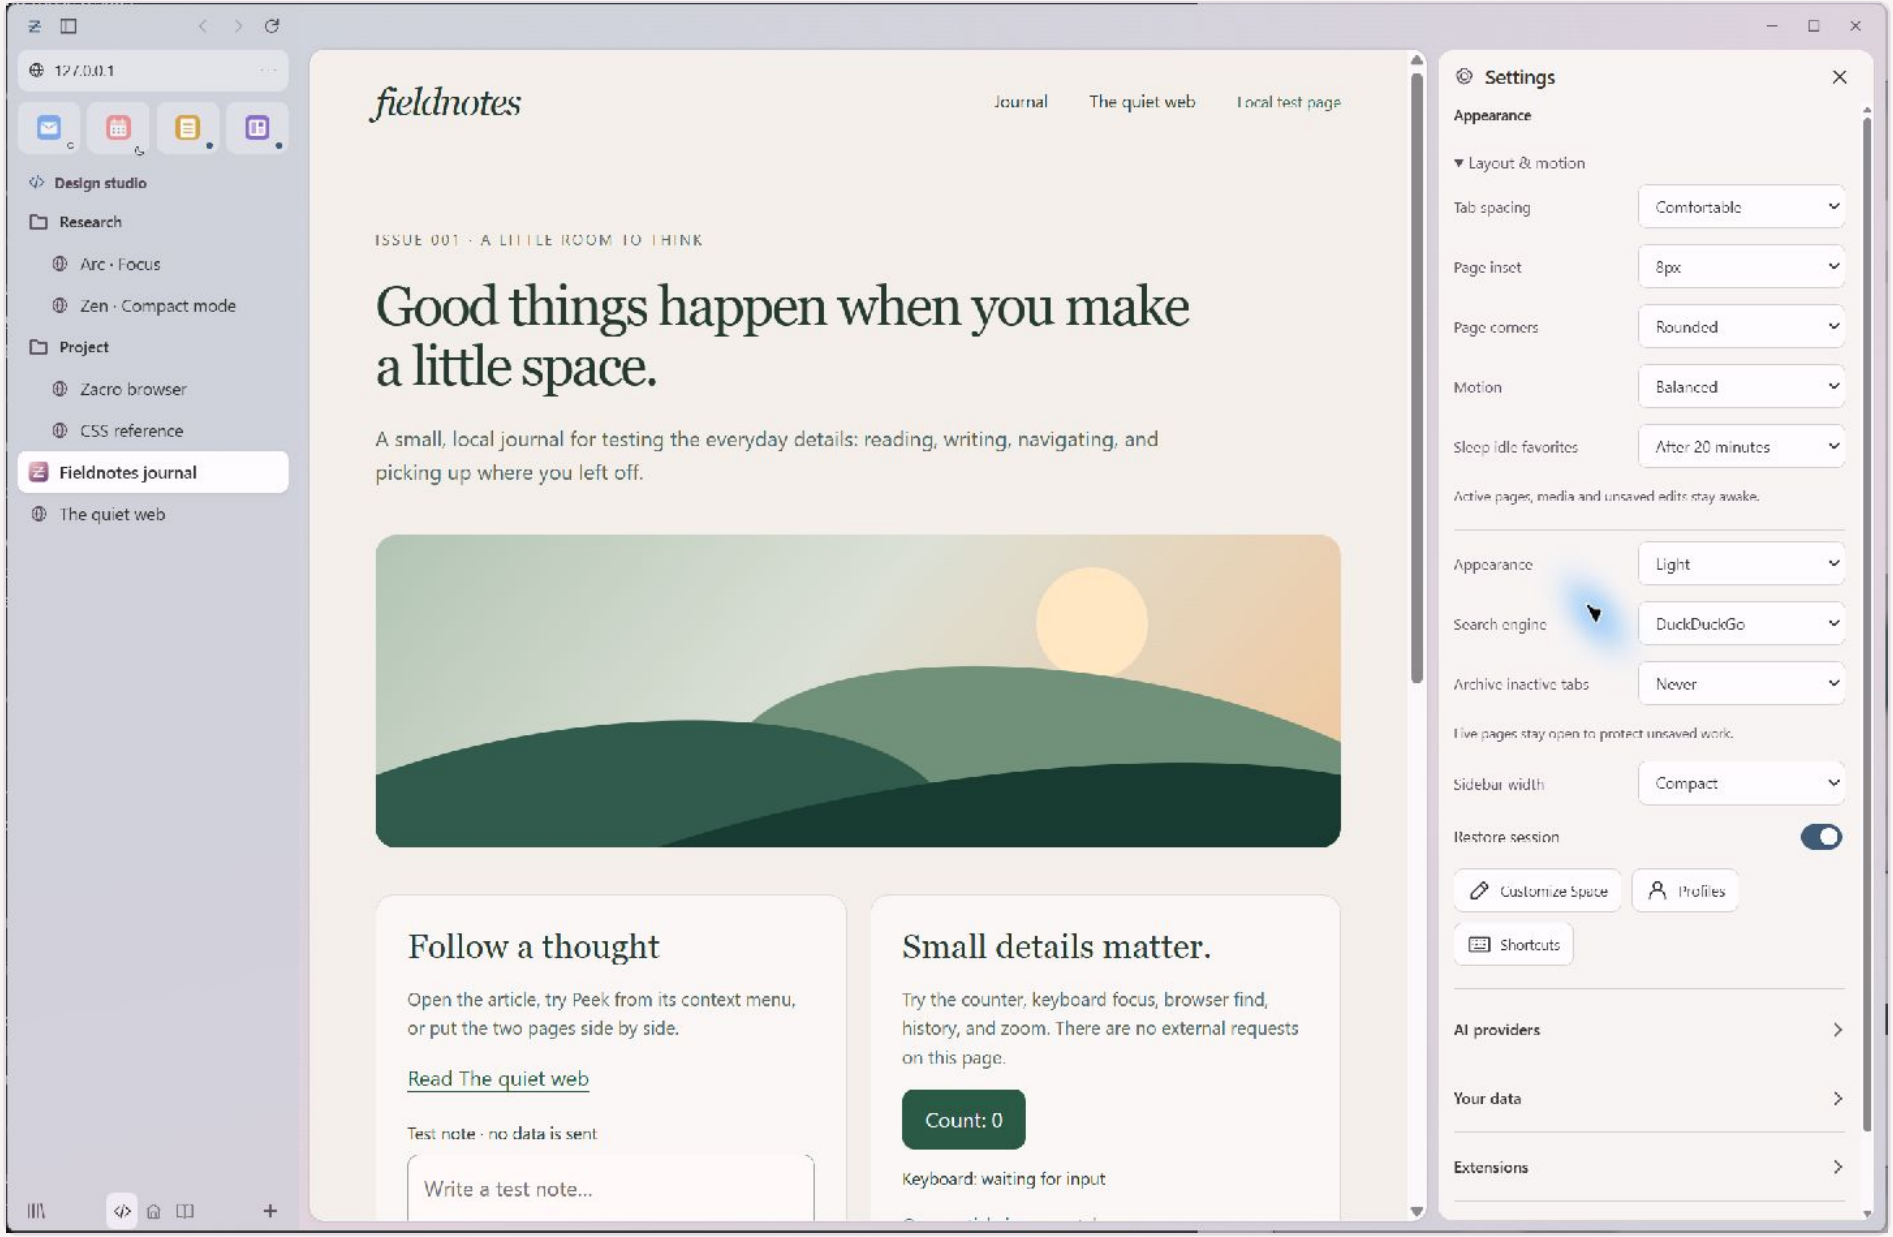

Choose an icon, two custom colors, gradient balance, grain, opacity and blur. Preview changes live, then save or cancel. Glass blends the Space colors within the window. The interface preserves readable contrast and follows reduced-transparency preferences.

# A clear question. Chosen pages.

Summarize, explain, compare or research from the palette. Review the page context and edit the prepared question before sending. Remove shared pages, edit or retry questions, and copy answers with sources. Live provider-account acceptance remains pending.

# Comfort, down to the details.

Adjust tab density, page inset, corner radius, animation speed and the idle-favorite timer. Space swipes follow displacement until release; sidebar motion supports quick reversals. Keyboard shortcuts remain editable. This is a development build with open release gates.
